MBatch 05-04
Using MBatch Assessments: RBN_Pseudoreplicates
Tod Casasent
2017-11-10-1455

Introduction

These instructions are aimed at people familiar with R and familiar with TCGA/GDC platforms and data types. They are intended to introduce the reader to producing the given assessment. These instructions will only rarely, if ever, touch on the appropriateness of the assessment algorithm or interpretation of output. See MBatch_01_InstallLinux.docx for instructions on downloading test data.

Algorithm

RBN_Pseudoreplicatesis a function used to perform the RBN correction algorithm on two datasets, using pseudoreplicates. This function takes structures (matrices) and returns a corrected matrix of data.

Output

The primary output method for MBatch is to view results in the Batch Effects Website. Correction algorithms generally do not create graphical output and instead create TSV output files.

Usage

RBN_Pseudoreplicates(theInvariantMatrix, theVariantMatrix,

theInvariantReplicates, theVariantReplicates, theInvariantGroupId = "",

theVariantGroupId = "", theMatchedReplicatesFlag = TRUE,

theCombineOnlyFlag = FALSE, thePath = NULL, theWriteToFile = FALSE)

Arguments

theInvariantMatrix Matrix with sample names in colnames and features (like genes) in rownames. This matrix is invariant.

theVariantMatrix Matrix with sample names in colnames and features (like genes) in rownames. This matrix is variant.

theInvariantReplicates Vector of feature ids indicating replicates for variant data.

theVariantReplicates Vector of feature ids indicating replicates for invariant data.

theInvariantGroupId Group name used for labelling invariant features when combining matrixes. This defaults to "", but the user should generally provide a value.

theVariantGroupId Group name used for labelling variant features when combining matrixes. This defaults to "", but the user should generally provide a value.

theMatchedReplicatesFlag If TRUE, indicates that NAs should be added for missing replicates. Defaults to TRUE.

theCombineOnlyFlag If TRUE, only combined the matrixes, do not correct. Defaults to FALSE.

thePath Location for output. Defaults to NULL. If NULL, no output file is created.

theWriteToFile TRUE means write corrected data to thePath. Only works if thePath is given. Defaults to FALSE.

Example Call

The following code is taken from the tests/RBN_Pseudoreplicates.R file. Data used is from the testing data as per the MBatch_01_InstallLinux.docx document.

```
library(MBatch)

# set the paths

invariantFile="/bea_testing/MATRIX_DATA/rbn-pseudo-iset.tsv"

variantFile="/bea_testing/MATRIX_DATA/rbn-pseudo-vset.tsv"

theOutputDir="/bea_testing/output/RBN_Pseudoreplicates"

theRandomSeed=314

resolveDuplicates <- function(theNames)

{

# keep first instance of a name

# number subsequent ones starting with .1

make.unique(theNames)

}
```

```
readRPPAdataAsMatrix_WithTab <- function(theFile)
{
# read RPPA data as a dataframe
# column rppaDF[,1] contains row names that may contain duplicates
rppaDF <- readAsGenericDataframe(theFile)
# resolve duplicates in row names here
myRownames <- rppaDF[,1]
myRownames <- resolveDuplicates(myRownames)
# convert to matrix
myMatrix <- data.matrix(rppaDF[,-1])
rownames(myMatrix) <- myRownames
t(myMatrix)
}
# make sure the output dir exists and is empty
unlink(theOutputDir, recursive=TRUE)
dir.create(theOutputDir, showWarnings=FALSE, recursive=TRUE)
message("Reading invariant file")
invMatrix = readRPPAdataAsMatrix_WithTab(invariantFile)
message("Reading variant file")
varMatrix = readRPPAdataAsMatrix_WithTab(variantFile)
invPseudo <- c("BN", "BO", "BP", "BQ", "BR", "BS")
varPseudo <- c("AN", "AO", "AP", "AQ", "AR", "AS")
filename <- RBN_Pseudoreplicates(theInvariantMatrix=invMatrix,
theVariantMatrix=varMatrix,
theInvariantReplicates = invPseudo,
theVariantReplicates = varPseudo,
theInvariantGroupId="Grp1",
theVariantGroupId="Grp2",
theMatchedReplicatesFlag=FALSE,
theCombineOnlyFlag=FALSE,
thePath=theOutputDir,
```

theWriteToFile=TRUE)

Command Line Output

In the future, we plan to make the output from MBatch more user friendly, but currently, this produces the following output at the command line.

```
> library(MBatch)
>
> # set the paths
> invariantFile="/bea_testing/MATRIX_DATA/rbn-pseudo-iset.tsv"
> variantFile="/bea_testing/MATRIX_DATA/rbn-pseudo-vset.tsv"
> theOutputDir="/bea_testing/output/RBN_Pseudoreplicates"
> theRandomSeed=314
>
> resolveDuplicates <- function(theNames)
+ {
+ # keep first instance of a name
+ # number subsequent ones starting with .1
+ make.unique(theNames)
+ }
>
> readRPPAdataAsMatrix_WithTab <- function(theFile)
+ {
+ # read RPPA data as a dataframe
+ # column rppaDF[,1] contains row names that may contain duplicates
+ rppaDF <- readAsGenericDataframe(theFile)
+ # resolve duplicates in row names here
+ myRownames <- rppaDF[,1]
+ myRownames <- resolveDuplicates(myRownames)
+ # convert to matrix
+ myMatrix <- data.matrix(rppaDF[,-1])
+ rownames(myMatrix) <- myRownames
```

```
+ t(myMatrix)
+ }
>
> # make sure the output dir exists and is empty
> unlink(theOutputDir, recursive=TRUE)
> dir.create(theOutputDir, showWarnings=FALSE, recursive=TRUE)
>
> message("Reading invariant file")
Reading invariant file
> invMatrix = readRPPAdataAsMatrix_WithTab(invariantFile)
> message("Reading variant file")
Reading variant file
> varMatrix = readRPPAdataAsMatrix_WithTab(variantFile)
> invPseudo <- c("BN", "BO", "BP", "BQ", "BR", "BS")
> varPseudo <- c("AN", "AO", "AP", "AQ", "AR", "AS")
> filename <- RBN_Pseudoreplicates(theInvariantMatrix=invMatrix,
+ theVariantMatrix=varMatrix,
+ theInvariantReplicates = invPseudo,
+ theVariantReplicates = varPseudo,
+ theInvariantGroupId="Grp1",
+ theVariantGroupId="Grp2",
+ theMatchedReplicatesFlag=FALSE,
+ theCombineOnlyFlag=FALSE,
+ thePath=theOutputDir,
+ theWriteToFile=TRUE)

```

2017 10 18 12:51:16.743 WARN megazone23 Less than 30 replicates provided for Variant Matrix. RBN's performance may deteriorate.

2017 10 18 12:51:16.743 INFO megazone23 Found 213 common features in both matrices.

2017 10 18 12:51:16.763 DEBUG megazone23 Write to file /bea_testing/output/RBN_Pseudoreplicates/ANY_C
RBN_Pseudoreps.tsv

2017 10 18 12:51:16.772 DEBUG megazone23 Finished write to file /bea_testing/output/RBN_Pseudoreplicates/ANY_Corrections-RBN_Pseudoreps.tsv

2017 10 18 12:51:16.773 INFO megazone23 RBN_internal - completed

Example File Output

The above code creates the following output files. Files are named using the following naming convention:

ANY_Corrections-RBN_Pseudoreps.tsv

The TSV file with the combined/corrected dataset is written by the MBatch package.
